I am a forward-thinking web designer and developer who loves to constantly learn. I have an open mind and enjoy collaboration with others to ensure the final product is the best it can be. I recognize where my strengths and weaknesses are, and utilize my resources to best complement them. I would like to continue to work with these guidelines, continually growing and expanding my knowledge and skill set.

I have an Art & Design degree and was originally a print graphic designer. I taught myself HTML in college, back when only people in academia and government had web pages and you had to pay for browsers! In my quest to constantly learn, even though I started in print, I quickly morphed into web design, followed closely by web development. I can code HTML from scratch, as well as CSS/CSS3, JavaScript, and programming languages, including Cold Fusion, PHP and Perl. That said, I am definitely one to see the benefit of not re-inventing the wheel, and will use frameworks, libraries and the like when it is appropriate. I also see the great benefit of totally custom programming when warranted by the final project scope and needs.

As an owner of several business including a Screen Printing, Embroidery, Vinyl and Quilting shop, I am responsible for all web design & development, and involved in all functional aspects of the shop including design, output and technical execution. Additionally, I was an owner of a social club and designed and developed the website to support the membership.

My desire to continually learn keeps me busy on many fronts. I enjoy new challenges and the reward of a job well done. Seeing my designs and projects in use is one of my favorite rewards!
